

BIJLAGE F**NTG FILESERVER faciliteiten**

13 oktober 1989

\$

```
$ SEND LISTSERV@HEARN
  > GET TEX-NL FILELIST
  (> GET filename filetype)
```

\$

* TEX-NL FILELIST for LISTSERV@HEARN.

*

* TeX-NL Filelist

*

* Contains

* -- general TeX stuff (implementations for micros, graphical shells, printer drivers)

* -- specifically Dutch stuff (styles and options, hyphenation patterns)

* -- Dutch TeX Users Group (NTG) stuff

*

* *****

*

* This file lists the programs that are stored on LISTSERV and can be retrieved by network users.

*

* If an entry shows nrecs=0 the file is not available.

*

* This filelist may be sorted in columns 47 to 63 to get a list of files in the order of their updates. Sorting in descending order shows the most recently updated files at the top.

*

* ::

*

* The GET/PUT authorization codes shown with each file entry describe who is authorized to GET or PUT the file:

*

* ALL = Everybody

* N/A = Not Applicable

* LCL = Local users, as defined at installation time

* PRV = Private, ie list members

* OWN = List owners

* MAD = Node Administrators, ie official BITNET/EARN contacts

* CTL = LISTSERV Controllers (Also called "Postmasters")

*

* *: NTG = 'CGL@HRRUG5', /* Kees v d Laan */

* *: 'GASPARD@HROEUR5', /* Gaspard de Jong */

* *: 'U641000@HNYKUN11', /* Victor Eijkhout */

* *: 'EVERS@HUTRUU53' /* Evert-Jan Evers */

* *: III = 'INFO@HNYKUN11' /* EARN Information service (only fo*/

*

* ::

* *****

*

* Dutch hyphenation patterns.

* Hyphen1.TeX: short but satisfactory. (author: Peter Vanroose)

* Hyphen1.doc: some notes by Peter Vanroose.

```

* Hyphen2.TeX: long and powerful. (author: Henk Pennings)
*           note that this requires stretching the 'triesize'
*           of both TeX and IniTeX!
*

*
* Options for Dutch.
* A4.STY:  A4-paper width and height. (author: Nico Poppelier)
*           Note that this is not the A4 option of John Pavel.
* Dutch.STY: Redefines captions and does other useful things for
*           all standard document styles. (author: Johannes Braams)
*           this is really an international option.
* German.STY: The style on which 'Dutch' was based. The two are
*           compatible. (author: Hubert Partl)
* Sober.STY: Reduces section headings and white spaces a bit;
*           this is only repair for the standard styles. The official
*           NTG styles (below) can do without.
*           (author: Nico Poppelier)

*
*****
*
* Dutch styles.
* (author: Victor Eijkhout)
* Completely compatible to 'article' and 'report', but improved layout;
* these styles have as default language English,
* for Dutch or German add corresponding style options.
* Artikel1.STY : Article-compatible. Tight look.
* Artikel2.STY : Article-compatible. Heavily indented. Quite something else.
* Artikel3.STY : Article-compatible. Zero parindent, positive parskip,
*           otherwise similar to Artikel1.
* Rapport1.STY : Report-compatible. Looks like Artikel1.
* Rapport2.STY : Report-compatible. Looks like Artikel2.
* Rapport3.STY : Report-compatible. Looks like Artikel3.
*
* Options for the Dutch styles.
* Ntg10.STY   : 10point option for all styles.
* Ntg11.STY   : 11point option for all styles.
* Ntg12.STY   : 12point option for all styles.
* Voorwerk.STY : Replaces Titlepage.sty for report styles.
*

```
*
```

```

* Pleasant reading material about TeX and its uses.
* Ntgstyle TEX  Manual for the Dutch LaTeX styles
* Layout  TEX  Article about documentstyle development in LaTeX.
*          Intended as supplement to chapter 5 LaTeX book.
* Layout2 TEX  Goes with previous. In German. (Hubert Part1)
* Refman  STY  Needed for previous two.
* Bridge  TEX  About setting bridge games in LaTeX (Kees van der Laan)
* Artdoc  TEX  The history of the 'Artikel' styles. Almost a
*          manual for document style development. In Dutch.
* Rapdoc  TEX  The same for the 'Rapport' styles. (Victor Eijkhout)
